## A Brief History of HTML

Updated by Rob Gravelle

Interest in and use of the World Wide Web has been expanding at a phenomenal rate. As the Web grows, so must its vehicle of communication, HTML. The HTML 2.0 specification was published in November of 1995. Since then, the HTML 3.0 draft specification expired on September 28, 1995, without becoming recommended, but HTML 3.2 became a W3C (World Wide Web Consortium) recommendation on January 14, 1997. The public draft for HTML 4.0 was released on July 8, 1997 and was officially recommended by the W3C in December that year. It would be another 17 years before the current HTML5 standard was published in October of 2014.

In addition to this official work on HTML, the browsers have been making their own additions to HTML. Some changes were eventually adopted into W3C HTML Recommendations; others remain proprietary coding aspects that only the individual browsers recognize. The browsers' versions of HTML changed, too, in a game of marketing and programming one-upmanship, hoping to lock Web developers into using one browser or the other exclusively.

### Faster Big Data Analytics and Better Responsiveness with IBM Cloud

The cloud offers elasticity and flexibility to meet a range of demands for Big Data initiatives. Not all infrastructure-as-a-service (IaaS) providers are the same, though, and your organization requires performance and speed advantages to make Big Data initiatives successful. Recently, Principled Technologies ran a Hadoop-based Big Data workload and a series of networking tests on two IaaS providers: IBM® Cloud and Amazon® Web Services (AWS®) Elastic Compute Cloud® (EC2®). ### Driving Enterprise Chatbot Adoption

The enterprise chatbot landscape is undergoing a significant shift, driven by the transformation to the digital workplace. Enterprise interest in chatbots is accelerating as a result of the need to deliver on the twin mandates of user experience and productivity. According to Everest Group, about 70% of large enterprises believe that virtual service desk agents will be the primary point of contact for their service desk operations by 2020. Read the latest report by Everest Group to learn more ...
